

What is Rinse Aid?

RINSE AID is a concentrated rinse additive that speeds up drying, eliminates streaking and prevents water-spotting on dishware after being washed in a machine.

RINSE AID is also ideal for use in combi-ovens to neutralise alkaline residue, eliminate water spotting and help with quick drying.

Key Benefits

- ✓ Speeds up drying
- ✓ Eliminates streaking
- ✓ Prevents water-spotting
- ✓ Effective in hard water

How Does It Work?

RINSE AID is a concentrated rinse additive that speeds up drying and improves the cleanliness of washed crockery, glasses and cutlery by eliminating streaking and preventing water spotting.

By reducing the surface tension of the hot rinse water, RINSE AID makes the rinse water run off dishes and cutlery in even "sheets", so that droplets are not left behind to cause spots or slow down the drying stage. Manual towel drying is unnecessary when RINSE AID is used.

For Use On...

RINSE AID is designed for use on crockery, glassware and cutlery in dishwashing machine. RINSE AID can also be used as part of the cleaning cycle for combi-ovens.

Technical Data

Composition

RINSE AID contains low foaming surfactants with a high wetting action together with stabilisers to keep the surfactants active at high temperatures. The low foaming properties are useful in defoaming food soils which can accumulate in the wash tank.

Properties

COLOUR – Transparent blue liquid
ODOUR – Faint alcohol odour
pH = 5.0 – 6.0
FOAM – Low foaming

Environmental Care

RINSE AID conforms with all statutory environmental requirements. It is based on safe ingredients selected to perform efficiently so there is no waste or damage. RINSE AID is non-flammable and phosphate-free. RINSE AID containers will be cleaned and reused if returned to Agar Cleaning Systems Pty Ltd., significantly reducing plastic usage and waste. They can also be recycled.

Quality

The design, manufacture and supply of all Agar chemical products is controlled by the Agar Quality Management System which is registered and externally audited by SAI Global as complying with the requirements of AS/NZS ISO 9001 "Quality Management Systems – Requirements".

First Certified: 30 April 1996 SAI Certificate No.: QEC7358

Application

Dishwashing Machines:

- RINSE AID is injected by the electronic pumping equipment into the final rinse water in the dishwasher. The pump injects a correctly metered quantity with each rinse cycle. For machines with built-in RINSE AID dispensers, follow the Manufacturer's Directions.
- Volumes in the range of 2 to 5ml per cycle should give excellent results. Performance may be influenced by the temperature of the rinse water, the efficiency of the machine's rinse action, the temperature of the washed articles and the quantity of RINSE AID used.

Combi-Ovens:

- RINSE AID can be used as part of the automatic cleaning cycle, follow the Manufacturer's Direction.
- For the best results, use in conjunction with COMBI-OVEN CLEANER.

Disposal Information

I. Used solutions -

Used Solutions of RINSE AID should be poured into a drain or trough that leads to the sewer system or a septic tank. These systems have a method for treating and breaking down the waste. Used solutions of detergent should not be poured into stormwater drains or down driveways as these drains are designed for rainwater and ultimately lead to the local river system.

2. Unused product

It is best to keep the product and use it up! If this is not possible, try to give it to someone who can use it. (Make sure the product is in its original, labelled container).

If there is no alternative but disposal, it is safe to pour modest quantities of this product down the drain (to sewer) with running water. Leave the cold tap running for a few moments afterwards as this dilutes the product and reduces the concentration in the wastewater.

Remember, do not mix different cleaning products together during disposal!

3. Empty packaging

Bottles and drums

Our 5L and 20L bottles and drums are made from HDPE (polyethylene) or PET which can be recycled. You can dispose of these containers via the kerbside collection program or other recycling system. RINSE AID containers will be cleaned and reused if returned to Agar Cleaning Systems Pty Ltd, significantly reducing plastic usage and waste.

Cardboard cartons

Used boxes should be flattened and recycled in OCC (old, corrugated cardboard) or mixed wastepaper recycling programs.

Available in: 5L, 15L, 20L

Agar Cleaning Systems maintains Safety Data Sheets (SDS) on all its products. These sheets contain information that you may need to protect your employees and customers against health or safety hazards associated with our product. Agar Cleaning Systems recommends that you obtain a copy of the respective SDS sheet prior to using this product. The information in the Product Data Sheet is based on data we believe to be reliable. It is offered in good faith, but without guarantee, as conditions and methods of use of our product are beyond our control.
